LCR In-Wall Speakers

Sketch LCR Front Speakers are now available in an in-wall model with performance that is identical to the attachable version. You can enjoy Artison's exclusive DualMono® Center Channel technology in all of your audio applications including large flat panel displays. Sketch complements the needs of today's lifestyle oriented customer who is budget conscious.

Sketch In-Wall LCRs are set apart by the engineering of its front speakers, which are configured with a DualMono® Center Channel to eliminate the need for a separate center channel speaker box. With DualMono, the upper portion of both right and left speakers produces an identically matched monaural sound, effectively placing crisp, clear dialogue in the center of the screen, rather than above or below as with a typical center channel speaker box. The result is exceptional sound quality without the obtrusive appearance of most discrete high-performance center channel speakers. Long Throw Polypropylene Cones and forward firing proprietary Soft Dome Silk Tweeters give an accurate and dynamic Home Theater experience to a larger listening area.

Easy to install, Sketch In-Wall LCRs come from the factory with a self contained acoustic enclosure. Because these speakers are placed on either side of a display, you will not need to cut into a stud to put them in, as you would with a conventional horizontal center channel speaker. These unique in-wall speakers blend beautifully into any environment and will give you extraordinary audio performance whether you are watching your favorite movie or listening to music.
