Low Reluctance Return Path and Multiple Magnetic Air Gap Technologies were used to design the worlds most advanced Mid Bass / Mid Range Drivers for the Artison Sound Bar. These new ideas allow the use of small diameter three inch drivers with a very long linear throw of a half inch to deliver very high quality full range sound. The result is a Sound Bar with an overall height of just 4" that will decisively outperform speakers of more conventional designs. This slim three channel solution can easily fit in front of a standard plasma or LCD television on a stand without blocking the screen. The attachable design comes with a grille that matches the color and width of the television allowing it to disappear in plain sight.
