LCR DualMono® Speakers M-LCR-DM

State-of-the-Art Technology-Innovative Speaker Design

Artison's Masterpiece LCR DualMono® speakers offer a seamless, high fidelity solution that dramatically enhances and connects the audio and video in one Total Involvement Experience. Masterpiece LCR-DMs combine three front-channel speakers (Left, Right, Center) in two slim enclosures utilizing Artison's patented DualMono® Center Channel technology, which projects crisp clear dialog from the center of the video display rather than above or below the set. Designed to be attached to a flat panel display or mounted to the wall, M-LCR-DMs Side-Firing Stage Tweeters widen the soundstage and give the listener a completely encompassing accurate Home Theater experience. M-LCR-DM speakers can be seamlessly integrated into any flat panel installation.

All-New Driver Technologies, Innovative Curved Line Arrays

Artison incorporates all-new driver technologies in the M-LCR-DMs offering an outstanding audio performance. The Masterpiece LCR DualMono speakers feature leading-edge Curved Line Arrays utilizing thirty-two 25mm ART (Artison Reference Theater) Drivers. The Curved Line Array design controls the vertical dispersion pattern of the speaker and creates a wide horizontal image. Curved Line Arrays are combined with the Inverted Magnet Structure 5.5" Long Throw Kevlar Midrange/Woofers which provide a low crossover frequency from the woofer to the Array of 800 Hz. Because of this design all drivers stay out of cone breakup modes which dramatically reduces distortion. All of the advanced sonic technologies in the Masterpiece LCR-DM speakers work together to deliver the powerful, crystal clear audio that defines the Artison Total Involvement Experience™.

Great Sound + Great Looks = Total Involvement Experience™

The Artison Total Involvement Experience is about bringing world-class sound together with elegant, unobtrusive aesthetics to create a realistic dynamic audio/video experience. Masterpiece LCR-DM speakers come with "Easy Match Custom Grilles" that are cosmetically matched for both the height and color of any flat panel TV. Artison's new Thin Universal Mounting Bracket (UMB) allows attachment to any new super thin TV ranging in depth from .28" – 4.5". M-LCR-DM speakers are compatible with most displays 55" diagonal or above and a minimum super thin depth of 8mm (0.28"). These sleek panels match any décor and provide a seamless aesthetic effect. All Custom Grilles are made to order and shipped within 48 hours of purchase. For total ease of installation, all necessary mounting brackets and hardware are included in the LCR-DM speaker box.
